JOURNAL OF APPLIED PHYSICS VOLUME 28, NUMBER 12 DECEMBER, 1957

Subject Index to Volume 28

References with (L) are to Letters to the Editor; (RR) to Research Reports; (E) to Errata

Adhesion
Radiation due to adhesive breaks between high polymers and glass, R. C. Williams—1043
Theory of peeling through a Hookean solid, J. J. Bikerman—1484

Antennas
Radiation due to an impulsive current in a vertical antenna placed on a dielectric ground, C. L. Pekeris and Z. Alterman—1317

Ballistics
Apsidal motion of an IGY satellite orbit, L. Blitzer—1362(L)
Dynamics of a projectile penetrating sand, W. A. Allen, E. B. Mayfield, and H. L. Morrison—370
Dynamics of a projectile penetrating sand. II, W. A. Allen, E. B. Mayfield, and H. L. Morrison—1331
Dynamics of a spinning rocket with varying inertia and applied moment, K. Jarmolow—308
High-velocity, light-gas gun, W. D. Crozier and W. Hume—892
Oblateness perturbation of elliptical satellite orbits, L. Blitzer and A. D. Wheelon—279
Supersonic drag of spheres at low Reynolds numbers in free flight, A. May—910
Universal gravity turn trajectories, G. J. Culler and B. D. Fried—672

Combustion
Applications of the electronic probe to the study of turbulent flames, D. W. Denniston, Jr., J. R. Oxendine, D. H. Knapschaefer, D. S. Burgess, and B. Karlovitz—70
Combustion and detonation in gases, B. Greifer, J. C. Cooper, F. C. Gibson, and C. M. Mason—289
Measurement of the burning constant of a fuel drop, B. J. Wood and H. Wise—1068(L)

Computing Techniques and Machines
Magnetic writing on thin films of MnBi, H. J. Williams, R. C. Sherwood, F. G. Foster, and E. M. Kelley—1181
Trapped flux superconducting memory, J. W. Crowe—1069(L)

Crystals and Crystal Growth
Crystal stability and elastic constants, G. R. Alers and J. R. Neighbours—1514(L)
Dislocations observed in a silver chloride crystal, J. W. Castle—743(L)
Etching of single-crystal germanium spheres, R. C. Ellis, Jr.—1068(L)
Evidence for subgrains in MnBi crystals from bitter patterns, W. C. Ellis, H. J. Williams, and R. C. Sherwood—1215(L)
Growth of tellurium single crystals by the Czochralski method, T. J. Davies—1217(L)
Kinetics of spherulite growth in high polymers, B. B. Burnett and W. F. McDevit—1101
On the origin of certain spirals of large step-height observed on crystal surfaces, A. R. Lang—497
Sapphire microcrystals, growth and defect structure of, W. W. Webb and W. D. Forgeng—1449
X-ray study of polygonization in copper single crystals, C. T. Wei, M. N. Parthasarathi, and P. A. Beck—874
Zinc and cadmium whiskers, R. V. Coleman and N. Cabrera—1360(L)

Dielectrics and Dielectric Breakdown in Insulators
Backscattering from dielectric-coated infinite cylindrical obstacles, C. C. H. Tang—628
Dielectric strength of polyethylene at 3300 megacycles, H. Farber and J. W. E. Griemsmann—1002
Dissipation of energy by 2.5–10 kev electrons in Al_2O_3, J. R. Young—524
Electric breakdown and conduction through Mylar films, Y. Inuishi and D. A. Powers—1017
Electric strength and liquid structure, T. J. Lewis—503
Fading of radio waves scattered by dielectric turbulence, R. A. Silverman—506
Fading of radio waves scattered by dielectric turbulence, R. A. Silverman—922(E)
Limit-periodic dielectric media, R. M. Redheffer—820(L)
Microwave gas discharge breakdown in air, nitrogen, and oxygen, D. J. Rose and S. C. Brown—561
Relation of radio measurements to the spectrum of tropospheric dielectric fluctuations, A. D. Wheelon—684

Diffusion
Diffusion of oxygen in silicon, R. A. Logan and A. J. Peters—819(L)
Donor diffusion in oxide cathodes, R. W. Peterson—1176
Effect of edge dislocations on the alloying of indium to germanium, J. I. Pankove—1054
Effect of structural defects in germanium on the diffusion and acceptor behavior of copper, C. S. Fuller and J. A. Ditzenberger—40
Fabrication of multiple junctions in semiconductors by surface melt and diffusion in the solid state, K. Lehovec and A. Levitas—106
Hydrogen permeation through steel during abrasion, R. C. Frank and D. E. Swets—380(L)
Influence of the cathode base on the chemical activation of oxide cathodes, R. W. Peterson, D. E. Anderson, and W. G. Shepherd—22
Permeation of gases through solids, F. J. Norton—34
Retrograde solubility of aluminum in silicon, D. Navon and V. Chernyshov—823(L)
Solubility and diffusivity of gold, iron, and copper in silicon, J. D. Struthers—516(L)
Theory of diffusion constants in interstitial solid solutions of b.c.c. metals, A. Ferro—895
Void formation in silver-gold diffusion couples, R. Resnick and L. L. Seigle—513(L)

Elasticity and Inelasticity
Creation of dislocation in LiF at low stresses, J. Weertman—1068(L)
Crystal stability and elastic constants, G. R. Alers and J. R. Neighbours—1514(L)
Effect of irradiation on dynamic mechanical properties of 6-6 Nylon, C. W. Deeley, A. E. Woodward, and J. A. Sauer—1124
Equipment to measure the energy absorption of films at high strain rates, R. D. Spangler and E. B. Cooper—329
Linear dissipation in solids, C. Lomnitz—201
Low-temperature measurements of the Young's modulus and internal friction of copper during irradiation, D. O. Thompson, T. H. Blewitt, and D. K. Holmes—742
Mechanical behavior of plastics, I. J. Gruntfest, E. M. Young, Jr., and W. Kooch—1106
Photoelastic properties of polystyrene in the glassy state. I. Effect of molecular orientation, R. D. Andrews and J. F. Rudd—1091
Photoelastic properties of polystyrene in the glassy state. II. Effect of temperature, J. F. Rudd and E. F. Gurnee—1096
Plastic deformation of copper and silver whiskers, S. S. Brenner—1023
Strength and fatigue of glass at very low temperatures, R. H. Kropschot and R. P. Mikesell—610
Time dependence of mechanical breakdown in bundles of fibers. I. Constant total load, B. D. Coleman—1058
Time dependence of mechanical breakdown in bundles of fibers. II. The infinite ideal bundle under linearly increasing loads, B. D. Coleman and D. W. Marquardt—1065

Electrical Circuits and Networks
Effect of magnetic field on coupled helix attenuators, M. H. Miller, B. Hershenov, and J. R. Black—1363(L)
Electromagnetic flowmeter without external magnet, J. A. Shercliff—140(L)
Explicit formulas for Tschebyscheff and Butterworth ladder networks, L. Weinberg—1155
Network synthesis for a prescribed impulse response using a real-part approximation, R. A. Pucel—124
Noise in nonlinear oscillators, M. A. Garstens—352
Random interchange of circuits with applications counting rate meters and function generators, R. M. Lichtenstein—984

Electrical Conductivity
Electrical conductivity of fused quartz, J. Cohen—795
Electrical conductivity of fused quartz, J. Cohen—1216(E)
Electrical conductivity of Plexiglas, R. J. Munick, 1302
Electrical conductivity of thermally ionized air produced in a shock tube, L. Lamb and S. Lin—754
Electrical properties of arc-evaporated carbon films, M. D. Blue and G. C. Danielson—583
Electrical resistances of thin metal films before and after artificial aging by heating, R. B. Belser—109
Electrical resistivity of boron, E. S. Greiner and J. A. Gutowski—1364(L)
Electrical resistivity of cyclohexane as a function of temperature and water concentration, P. Staudhammer and W. F. Seyer—405
Electrical resistivity of nickel-palladium alloys, A. W. Overhauser and A. I. Schindler—544
Exact current-voltage relation for the metal-insulator-metal junction with a simple model for trapping of charge carriers, G. H. Suits—454
Hydrogen doping as the mechanism of electrolytic rectification, P. F. Schmidt—278(L)
Resistivity and density of polycrystalline yttrium iron garnet, L. G. Van Uitert and F. W. Swanekamp—1513(L)

Stereo-micrographs of conductivity, L. Mayer—259
Thermionic and semiconducting properties of [Ag]-Cs_2O, Ag, Cs, J. E. Davey—1031
Thermoelectric power and resistivity of solid and liquid germanium in the vicinity of its melting point, C. A. Domenicali—749

Electrical Contacts

Breakdown fields of activated electrical contacts, F. E. Haworth—381(L)
Contribution to the theory of the contact between a carbon brush and a copper collector ring, E. Holm—1171
Effects of electrode materials and surface preparation on CdS-metal contacts, R. A. Greiner, R. F. Miller, and R. C. Retherford—1358
Ohmic and rectifying contacts to semiconducting CdS crystals, W. C. Walker and E. Y. Lambert—635
Technique for connecting electrical leads to semiconductors, O. L. Anderson, H. Christensen, and P. Andreatch —923(L)

Electrical Discharges in Gases

Calculation of the anode current from a hollow cathode, T. N. Chin—744(L)
Deposit spot patterns from low-index planes of metal single crystals in a new theory of cathode sputtering, E. B. Henschke—411
Effect of microwave signals incident upon different regions of a dc hydrogen glow discharge, B. J. Udelson—380(L)
Electron multiplication processes in high-voltage electrical discharge in vacuum, A. I. Bennett—1251
Formation of negative ions in gases by secondary collision processes, E. E. Muschlitz, Jr.—1414
Glow-arc transition in current-stabilized electrical discharges, J. Jenkins and T. B. Jones—663
Infrared emission from high-frequency discharges in CO_2, D. Cohen, R. Lowe, and J. Hampson—737
Microwave gas discharge breakdown in air, nitrogen, and oxygen, D. J. Rose and S. C. Brown—561
Microwave measurements of the properties of a dc hydrogen discharge, B. J. Udelson, J. E. Creedon, and J. C. French—717
Motion of an arc in a magnetic field, C. G. Smith—1328
Pinch effect, L. C. Burkhardt, R. E. Dunaway, J. W. Mather, J. A. Phillips, G. A. Sawyer, T. F. Stratton, E. J. Stovall, Jr., and J. L. Tuck—519

Electromagnetic Waves

Backscattering from dielectric-coated infinite cylindrical obstacles, C. C. H. Tang—628
Diffraction by an aperture, J. B. Keller—426
Diffraction by an aperture. II, J. B. Keller, R. M. Lewis, and B. D. Seckler—570
Effects of radiation damping on spin dynamics, S. Bloom —800
Extension of Babinet's principle to absorbing and transparent materials, and approximate theory of backscattering by plane, absorbing disks, H. E. J. Neugebauer—302
Fading of radio waves scattered by dielectric turbulence, R. A. Silverman—506
Fading of radio waves scattered by dielectric turbulence, R. A. Silverman—922(E)
Fields in gap-excited rectangular ducts, J. Van Bladel—1479
Junction of smooth flared wave guides, D. J. Leonard and J. L. Yen—1441
Microwave measurements of the properties of a dc hydrogen discharge, B. J. Udelson, J. E. Creedon, and J. C. French—717
Reaction field and its use in some solid-state amplifiers, P. W. Anderson—1049
Reflection of plane-polarized, electromagnetic radiation from an echelette diffraction grating, W. C. Meecham and C. W. Peters—216
Relation of radio measurements to the spectrum of tropospheric dielectric fluctuations, A. D. Wheelon—684
Solar radiation and atmospheric attenuation at 6-millimeter wavelength, R. N. Whitehurst, J. Copeland, and F. H. Mitchell—295
Some new aspects of the reflection of electromagnetic waves on a rough surface, M. A. Biot—1455
Theory of the ferromagnetic microwave amplifier, H. Suhl —1225
Theory of the microstrip, T. T. Wu—299

Electron and Ion Optics

Calculation of the anode current from a hollow cathode, T. N. Chin—744(L)
Note on the determination of electrode shapes for a Pierce-type electron gun, G. R. Brewer—634(L)

Electron Beams

Analysis of multivelocity electron beams by the density-function method, A. E. Siegman—1132
Current and velocity fluctuations at the anode of an electron gun, E. V. Kornelsen, R. F. C. Vessot, and G. A. Woonton—1213(L)
Density-function calculations of noise propagation on an accelerated multivelocity electron beam, A. E. Siegman, D. A. Watkins, and H. Hsieh—1138
Design and evaluation of an *S*-band rebatron, I. Kaufman and P. D. Coleman—936
Dissipation of energy by 2.5–10 kev electrons in Al_2O_3, J. R. Young—524
Electron beam analyzer, A. Ashkin—564
Excitation of space-charge waves in drift tubes, A. H. Beck—140(L)
Formation of high-density electron beams, G. R. Brewer—7
Nonlaminar flow in cylindrical electron beams, K. J. Harker—645
Small signal power theorem for electron beams, H. A. Haus and D. L. Bobroff—694
Space charge effects in beam-type magnetrons, R. W. Gould—599
Structure in magnetically confined electron beams, H. F. Webster—1388
Theory of the rebatron—a relativistic electron bunching accelerator for use in megavolt electronics, P. D. Coleman—927
Transverse scaling of electron beams, G. Herrmann—474
Use of scanning slits for obtaining the current distribution in electron beams, K. J. Harker—1354

Electron Diffraction

Backscattering a 5–20 kev electrons from insulators and metals, J. E. Holliday and E. J. Sternglass—1189
Contamination from copper specimen grids during electron diffraction, J. J. Comer—820(L)
Structure of spherulites as revealed by selected-area electron diffraction and electron microscopy, R. G. Scott—1089

Electron Emission

Analysis of the dc and pulsed thermionic emission from BaO, George A. Haas—1486
Donor diffusion in oxide cathodes, R. W. Peterson—1176
Electron emission in moderate accelerating fields, D. W. Juenker—1398
Emissivities of metallic surfaces at 76°K, M. M. Fulk and M. M. Reynolds—1464
Estimate of the time constant of secondary emission, A. van der Ziel—1216(L)
Grain boundaries for field emission microscopy, E. G. Brock—241
Influence of the cathode base on the chemical activation of oxide cathodes, R. W. Peterson, D. E. Anderson, and W. G. Shepherd—22

Electron Emission (*continued*)
On the cause of the anomalous flicker effect, W. W. Lindemann and A. van der Ziel—448
On the mechanism of electron emission in arcs with low boiling point cathodes, T. H. Lee—920(L)
On the mechanism of operation of the barium aluminate impregnated cathode, E. S. Rittner, W. C. Rutledge, and R. H. Ahlert—1468
Secondary electron emission of single crystals of MgO, N. R. Whetten and A. B. Laponsky—515(L)
Some observations on transmission secondary emission, J. R. Young—512(L)
Studies on the mechanism of operation of the *L* cathode. I, E. S. Rittner, R. H. Ahlert, and W. C. Rutledge—156
Studies on the mechanism of operation of the *L* cathode. II, W. C. Rutledge and E. S. Rittner—167
Thermionic and semiconducting properties of [Ag]-Cs_2O, Ag, Cs, J. E. Davey—1031
Thermionic constants and sorption properties of hafnium, H. D. Hagstrum—323

Electron Microscopy
An experimental study of electron scattering in electron microscope specimens, Cecil E. Hall and T. Inoue—1346
Carbon-stabilized collodion substrates for electron microscopy, W. C. T. Dowell—634(L)
Convenient replication of textile surfaces for electron microscopy, W. R. McMillan—277(L)
Convenient replication of textile surfaces for electron microscopy, W. R. McMillan—636(L)
Electron microscopy of aluminum crystals deformed at various temperatures, T. S. Noggle and J. S. Hoehler —53
Electron mirror microscopy of magnetic domains, Ludwig Mayer—975
Magnetic alignment of single iron particles, J. H. L. Watson—821(L)
Stereo-micrographs of conductivity, L. Mayer—259
Structure of spherulites as revealed by selected-area electron diffraction and electron microscopy, Robert G. Scott—1089

Electrostatics
Flux plotting analog for an axially symmetric potential field, W. L. Beaver—579
Potential and capacity of concentric coaxial capped cylinders, D. Kirkham—724

Explosives and Explosions
Application of radioactive tracers to the study of shaped charge phenomena, G. M. Bryan, R. J. Eichelberger, D. MacDonald and P. E. Zigman—1152
Combustion and detonation in gases, B. Greifer, J. C. Cooper. F. C. Gibson, and C. M. Mason—289
Dependence of the velocity of detonation of nitromethane on its initial temperature, M. P. Murgai—745(L)
Explosive induced shock waves. Part I. Plane shock waves, William E. Drummond—1437
High-velocity, light-gas gun, W. D. Crozier and William Hume—892
Multiple shock production, W. E. Drummond—998
Particle-size effects in explosives at finite and infinite diameters, M. E. Malin, A. W. Campbell, and C. W. Mautz—63
Phenomena associated with detonation in large single crystals, T. E. Holland, A. W. Campbell, and M. E. Malin —1217(L)
Possible explanation of "after-jet" by the detonation of shaped charges—1365(L)
Shock Hugoniot of air, W. E. Deal—782

Ferroelectricity
Activation field and coercivity of ferroelectric barium titanate, H. H. Wieder—367
Domain effects in polycrystalline barium titanate, E. C. Subbarao, M. C. McQuarrie, and W. R. Buessem—1194
Electrostatic considerations in $BaTiO_3$ domain formation during polarization reversal, R. Landauer—227
Fast neutron effects in tetragonal barium titanate, M. C. Wittels and F. A. Sherrill—606

Ferromagnetic Materials and Ferrites
Acoustic relaxations in ferrite single crystals, D. F. Gibbons—810
Coaxial line nonreciprocal phase shifters, Max Sucher and Herbert J. Carlin—921(L)
Dispersion relations for tensor media and their application to ferrites, B. S. Gourary—283
Domain structure effects in an anomalous ferrimagnetic resonance of ferrites, R. C. LeCraw and E. G. Spencer —399
Domain wall orientations in silicon-iron crystals, C. D. Graham, Jr., and P. W. Neurath—888
Effects of annealing on the saturation induction of ferrite containing nickel and/or copper, L. G. Van Uitert—478
Effects of size on the microwave properties of ferrite rods, disks, and spheres, J. O. Artman—92
Evidence for subgrains in MnBi crystals from bitter patterns, W. C. Ellis, H. J. Williams, and R. C. Sherwood —1215(L)
Ferrite slabs in transverse electric mode wave guide, H. Seidel—218
Form of Polder tensor for single crystal ferrite with small cubic symmetry anisotropy energy, H. Seidel and H. Boyet—452
Hall effect and ferromagnetism of very thin nickel films, R. Coren and H. J. Juretschke—806
Influence of copper and vanadium on the sintering of magnesium-type ferrites, L. C. F. Blackman—1511(L)
Magnesium-copper-manganese-aluminum ferrites for microwave applications, L. G. Van Uitert—320
Magnetic alignment of single iron particles, J. H. L. Watson—821(L)
Magnetic anisotropy and rotational hysteresis in elongated fine-particle magnets, I. G. Jacobs and F. E. Luborsky —467
Magnetic induction and coercive force data on members of the series $BaAl_xFe_{12-x}O_{19}$ and related oxides, L. G. Van Uitert—317
Magnetic influence on the recrystallized grain texture of a ferromagnetic alloy, B. Sawyer and R. Smoluchowski —1069(L)
Minimum saturating fields for ferromagnetic crystals, J. S. Kouvel—704
On the width and energy of domain walls in small multidomain particles, H. Amar—732
Permanent magnet oxides containing divalent metal ions. I, L. G. Van Uitert, M. H. Read, and F. J. Schnettler— 280(L)
Permanent magnet oxides containing divalent metal ions. II, L. G. Van Uitert and F. W. Swanekamp—482
Reaction field and its use in some solid-state amplifiers, P. W. Anderson—1049
Reproducing the properties of Alnico permanent magnet alloys with elongated single-domain cobalt-iron particles, F. E. Luborsky, L. I. Mendelsohn, and T. O. Paine —344
Resistivity and density of polycrystalline yttrium iron garnet, L. G. Van Uitert and F. W. Swanekamp— 1513(L)

Retardation effects caused by ferrite sample size on the frequency shift of a resonant cavity, J. E. Tompkins and E. G. Spencer—969
Rotational model of flux reversal in square loop ferrites, E. M. Gyorgy—1011
Single crystal "picture frames" of ferromagnetic aluminum-iron alloys, R. C. Hull—1212(L)

Fluid Dynamics
Hydrodynamics of a reacting and relaxing fluid, W. W. Wood and J. G. Kirkwood—395
Hydrodynamic theory for the flow of a viscoelastic fluid, Y. Pao—591
On transition from laminar to turbulent flow, F. R. Hama, J. D. Long, and J. C. Hegarty—388

Fluid Flow, Low Speed
A new method of flow visualization for low density wind tunnels, Ralph A. Evans—1005
Condensation interfaces in two-phase flows, P. Chiarulli and R. F. Dressler—990
Electromagnetic flowmeter without external magnet, J. A. Shercliff—140(L)
Flow in a viscous vortex, C. D. Pengelley—86
Teapot effect, Joseph B. Keller—859

Fracture
Strength and fatigue of glass at very low temperature, R. H. Kropschot and R. P. Mikesell—610
Tensile strength of plastics below the glass temperature, F. Bueche—784

Friction and Wear
Frictional heating and its influence on the wear of steel, N. C. Welsh—960
Mechanism of WS_2 lubrication in vacuum, V. R. Johnson, M. T. Lavik, and G. W. Vaughn—821(L)
Metal transfer in sliding contacts, D. G. Flom—850
Note on the wear of Teflon sliding on Teflon, D. G. Flom —1361(L)
Role of atmospheric oxidation in high speed sliding phenomena, M. Cocks—835

Liquids
Electric strength and liquid structure, T. J. Lewis—503
Nucleation at a liquid-liquid interface, Lloyd Trefethen —923(L)

Luminescence
Aging characteristics of electroluminescent phosphors, S. Roberts—262
Application of luminescence changes in organic solids to dosimetry, J. H. Schulman, H. W. Etzel, and J. G. Alland—792
Buildup of electroluminescent brightness, C. H. Haake—245
Electroluminescence deterioration, W. A. Thornton—313
Luminescent gas flow visualization for low density wind tunnels, W. B. Kunkel and F. C. Hurlbut—827
Secondary waves of electroluminescence, C. H. Haake—117
Secondary waves of electroluminescence, C. H. Haake—516(E)
Triboluminescence in semiconductors, D. A. Jenny—1515(L)

Magnetic Resonance
A solution of the Bloch equations determination of relaxation times in liquids, P. S. Hubbard and Theodore J. Rowland—1275
Comments on frequency-pulling of maser oscillators, C. H. Townes—920
Correction for the finite magnetic modulation amplitude in paramagnetic and nuclear magnetic resonance lines, W. J. Spry—660
Dependence of the ferromagnetic resonance line width on the shape of the specimen, A. D. Birk—190
Domain structure effects in an anomalous ferri-magnetic resonance of ferrites, R. C. LeGraw and E. G. Spencer —399
Effects of radiation damping on spin dynamics, S. Bloom —800
Ferromagnetic resonance absorption by thin conducting films in cavities, J. O. Artman—277(L)
Geometrical representation of the Schrödinger equation for solving maser problems, R. P. Feynman, F. L. Vernon, Jr., and R. W. Hellworth—49
Magnetic writing on thin films of MnBi, H. J. Williams, R. C. Sherwood, F. G. Foster, and E. M. Kelley—1181
Magnetostriction and magnetic anisotropy of MnBi, H. J. Williams, R. C. Sherwood, and O. L. Boothby—445
Maser oscillators, J. C. Helmer—212
Nuclear magnetic resonance, radiation damage and rigidity in branched polyethylene as a function of temperature, N. Fuschillo and J. A. Sauer—1073
Nuclear magnetic resonance studies of polyethylene, R. C. Rempel, H. E. Weaver, R. H. Sands, and R. L. Miller —1082

Magnetism
Dispersion relations for tensor media and their application to ferrites, B. S. Gourary—283
Domain changes during longitudinal magnetization of iron whiskers, G. G. Scott and R. V. Coleman—1512(L)
Domain wall orientations in silicon-iron crystals, C. D. Graham, Jr., and P. W. Neurath—888
Electron mirror microscopy of magnetic domains, Ludwig Mayer—975
Force on an anisotropic paramagnetic crystal in an inhomogeneous magnetic field, W. P. Wolf—780
Magnetic domain patterns on thin films, H. J. Williams and R. C. Sherwood—548
Magnetic viscosity in 4-79 molybdenum permalloy, O. J. Van Sant—486
Magnetization reversal in thin films at low fields, R. L. Conger and F. C. Essig—855
On the determination of magnetocrystalline anisotropy constants from torque measurements, J. S. Kouvel and C. D. Graham, Jr.—340
On the width and energy of domain walls in small multidomain particles, H. Amar—732
Preparation of permanent three-dimensional views of magnetic fields, L. R. Crump—530
Rotational model of flux reversal in square loop ferrites, E. M. Gyorgy—1011
Slow remagnetization times in 4-79 molybdenum permalloy, J. D. Blades and R. A. Tracy—516(L)

Magnetostriction
Magnetostriction of aluminum-iron crystals in the region of 6 to 30 atomic percent aluminum, R. C. Hall—707
Magnetostriction and magnetic anisotropy of MnBi, H. J. Williams, R. C. Sherwood, and O. L. Boothby—445

Mass Spectrometry
Analysis of gases at very low pressures by using the omegatron spectrometer, J. S. Wagener and P. T. Marth—1027
Application of the mass spectrometer to the study of the upper energy states of molecules, J. D. Morrison—1409

Metallurgy
Annealing of cold-worked copper by electron irradiation, C. J. Meechan—197
A simple geometric model explaining some properties of sintered materials, Ferdinand Euler—1342
Calorimetric study of Cu_3Au at high temperatures, M. Hirabayashi, S. Nagasaki, and H. Kōno—1070(L)

Metallurgy (*continued*)
Compressional creep of tin single crystals, J. Weertman —196
Density and resistivity changes in Au-Cd upon quenching, W. J. Sturm and M. S. Wechsler—1509(L)
Dimensional changes resulting from dezincification of alpha brass, W. J. Cooley and D. D. Van Horn—1292
Dislocation damping at high temperatures, J. Weertman —193
Dislocation damping at high temperatures, J. Weertman —636(E)
Dislocation mobility and release of cold work in cadmium, R. Kamel and A. Attia—1365(L)
Dislocation observed in a silver chloride crystal, J. W. Castle—743(L)
Electrical resistivity of nickel-palladium alloys, A. W. Overhauser and A. I. Schindler—544
Grain boundaries for field emission microscopy, E. G. Broch—241
Graphical analysis of diffusionless phase changes—the cubic to twinned orthorhombic transformation, D. S. Lieberman, T. A. Read, and M. S. Wechsler—532
Influence of copper and vanadium on the sintering of magnesium-type ferrites, L. C. F. Blackman—1511(L)
Internal friction in the presence of a static stress, G. S. Baker—734
Low-temperature deformation of copper single crystals, T. H. Blewitt, R. R. Coltman, and J. K. Redman—651
Low-temperature measurements of the Young's modulus and internal friction of copper during irradiation, D. O. Thompson, T. H. Blewitt, and D. K. Holmes—742
Low-temperature reactor irradiation effects in metals, T. H. Blewitt, R. R. Coltman, C. E. Klabunde, and T. S. Noggle—639
Magnetic influence on the recrystallized grain texture of a ferromagnetic alloy, B. Sawyer and R. Smoluchowski —1069(L)
On the orientation dependence of internal friction, A. Granato and K. Lucke—635(L)
Partial polygonization in impure copper crystals, F. W. Young, Jr., and N. Cabrera—787
Relationship between the fracture ductility transition and strain-hardening characteristics of a low carbon steel, J. M. Krafft, A. M. Sullivan, and G. R. Irwin—379(L)
Short-range order in partially ordered Cu_3Au, Arthur Paskin and R. J. Weiss—140(L)
Slip of zinc and cadmium whiskers, R. V. Coleman, B. Price, and N. Cabrera—1360(L)
Spiral etch pits in silicon, T. L. Johnston, C. H. Li, and C. I. Knudson—746(L)
Steady-state creep of crystals, J. Weertman—1185
Steady-state creep through dislocation climb, J. Weertman —362
Strain-amplitude dependent internal friction studies of dilute alloys of copper, S. Weinig—281(E)
Theory of thermal grooving, W. W. Mullins—333
X-ray determination of conjugate deformation twins in copper, F. A. Sherrill, M. C. Wittels, and T. H. Blewitt —526
X-ray study of order in the alloy $CuAu_3$, B. W. Batterman—556
Zinc and cadmium whiskers, R. V. Coleman and N. Coleman—1360(L)

Noise
Current and velocity fluctuations at the anode of an electron gun, E. V. Kornelsen, R. F. C. Vessot, and G. A. Woonton—1213(L)
Density-function calculations of noise propagation on an accelerated multivelocity electron beam, A. E. Siegman, D. A. Watkins, and Hsung-Cheng Hsieh—1138
Frequency spectrum of the Barkhausen noise, G. Biorci and D. Prescetti—777
Measurement of correlation coefficients, Scott H. Cameron —377(L)
Noise in nonlinear oscillators, M. A. Garstens—352
On the cause of the anomalous flicker effect, W. W. Lindemann and A. van der Ziel—448

Nuclear Physics
Angular averages in the scattering of slow neutrons by gases, H. C. Volkin—184
Application of radioactive tracers to the study of shaped charge phenomena, G. M. Bryan, R. J. Eichelberger, D. MacDonald, and P. E. Zigman—1152
Calculation of energy dissipation by gamma radiation near the interface between two media, Martin J. Berger—1502
Experimental gamma-ray collimator sensitivity patterns, F. M. Tomnovec and R. L. Mather—1208
Gamma-ray collimator penetration and scattering effects, Robert L. Mather—1200
Measurement of the Xe^{135} cross section and U^{235} fission yield of I^{135}, G. R. Hopkins and C. P. Jamieson—1362(L)
Neutron yields from thick targets bombarded by 24-Mev deuterons and 12-Mev protrons, W. E. Crandall, G. P. Millburn, and L. Schecter—273
Positronium formation in gases, V. W. Hughes—16

Nuclear Reactor
Effect of neutron interaction on criticality. II, G. W. Stuart—677
Long-wave neutron spectrum of the materials testing reactor, L. B. Borst and L. G. Miller—547
Measurements of the effective resonance integral in uranium metal and oxide in different geometries, Eric Hellstrand—1493
Measurement of the Xe^{135} cross section and U^{235} fission yield of I^{135}, G. R. Hopkins and C. P. Jamieson—1362(L)
Random interchange of circuits with applications to counting rate meters and function generators, Roland M. Lichtenstein—984
Resonance absorption of neutrons by thorium cylinders, M. V. Davis—714
Resonance absorption of neutrons by uranium cylinders, M. V. Davis—250

Optical Properties
Concerning Lewis' diffraction pattern in the plane of a half-screen, C. L. Andrews—1070(L)
Density of color centers in barium oxide as a function of the vapor pressure of barium, L. Timmer—495
Effect of illumination on the oxidation of copper single crystals in water, Jerome Kruger—1212(L)
Emissivity at 0.65 micron of silicon and germanium at high temperatures, F. G. Allen—1510(L)
Extension of Babinet's principle to absorbing and transparent materials, and approximate theory of backscattering by plane, absorbing disks, H. E. J. Neugebauer—302
Flow birefringence and stress. V. Correlation of recoverable shear strains with other rheological properties of polymer structures, Wladimir Philippoff, Frederick H. Gaskins, and John G. Brodnyan—1118
Hydrothermal synthesis of photoconductive cadmium sulfide, A. Kremheller and A. K. Levine—746(L)
Infrared emission from high-frequency discharges in CO_2, D. Cohen, R. Lowe, and J. Hampson—737
Infrared emissivities and absorptivities of gases, S. S. Prenner and A. Thompson—614

Magnetic writing on thin films of MnBi, H. J. Williams, R. C. Sherwood, F. G. Foster, and E. M. Kelley—1181
New method of flow visualization for low-density wind tunnels, R. A. Evans—1005
Note on Krishnan's reciprocity relation in light scattering, A. F. Stevenson—1015
Photoconductivity of thin films of arsenic trisulfide, H. Schlosser—512(L)
Photoelastic properties of polystyrene in the glassy state. I. Effect of molecular orientation, R. D. Andrews and J. F. Rudd—1091
Photoelastic properties of polystyrene in the glassy state. II. Effect of temperature, J. F. Rudd and E. F. Gurnee —1096
Photoelectric effect from borosilicate glass, Vijay Kumar Rohatgi—951
Preparation and photoconductive properties of cadmium telluride films, George G. Kretschmar and Lloyd E. Schilberg—865
Radiation due to adhesive breaks between high polymers and glass, R. C. Williams—1043
Reflection of plane-polarized, electromagnetic radiation from an echelette diffraction grating, W. C. Meecham and C. W. Peters—216
Solar radiation and atmospheric attenuation at 6-millimeter wavelength, R. N. Whitehurst, J. Copeland, and F. H. Mitchell—295
Structure and characteristics of silicon carbide light-emitting junctions, J. Patrick—765
Technique for photographing falling objects, J. C. Wiltse, A. Trammell, and J. W. Leight—743(L)
Temperature consideration in solar battery development, R. E. Halsted—1131

Phase Transformations
Acoustic relaxations in ferrite single crystals, D. F. Gibbons—810
Study of phase transitions in WO_3 with a high temperature x-ray diffractometer, J. A. Perri, E. Banks, and B. Post —1272
Graphical analysis of diffusionless phase changes—the cubic to twinned orthorhombic transformation, D. S. Lieberman, T. A. Read, and M. S. Wechsler—532
Multiple shock production, W. E. Drummond—998
Single crystal "picture frames" of ferromagnetic aluminum-iron alloys, R. C. Hull—1212(L)

Plastic Deformation
Compressional creep of tin single crystals, J. Weertman —196
Creation of dislocation in LiF at low stresses, J. Weertman—1068(L)
Detection of both vacancies and interstitials in deformed germanium, J. N. Hobstetter and P. Breidt, Jr.—1214(L)
Electron microscopy of aluminum crystals deformed at various temperatures, T. S. Noggle and J. S. Hoehler —53
Frequency dependence of ultrasonic attenuation and velocity on plastic deformation, A. Hikata and R. Truell—522
Linear dissipation in solids, C. Lomnitz—201
Low-temperature deformation of copper single crystals, T. H. Blewitt, R. R. Coltman, and J. K. Redman—651
Mechanical behavior of plastics, I. J. Gruntfest, E. M. Young, Jr., and Walter Kooch—1106
Plastic deformation of copper and silver whiskers, S. S. Brenner—1023
Steady-state creep of crystals, J. Weertman—1185
Time dependence of mechanical breakdown in bundles of fibers. I. Constant total load, Bernard D. Coleman—1058
Time dependence of mechanical breakdown in bundles of fibers. II. The infinite ideal bundle under linearly increasing loads, Bernard D. Coleman and Donald W. Marquardt—1065
X-ray properties of plastically deformed LiF, L. S. Bicks and R. T. Seal—541

Polymers
Dynamic mechanical properties of polyhexene. I, S. F. Kurath, E. Passaglia, and R. Pariser—499
Effect of irradiation on dynamic mechanical properties of 6-6 Nylon, C. W. Deeley, A. E. Woodward, and J. A. Sauer—1124
Electrical conductivity of Plexiglas, R. J. Munick—1302
End corrections in the capillary flow of polyethylene, E. B. Bagley—624
Flow birefringence and stress. V. Correlation of recoverable shear strains with other rheological properties of polymer structures, Wladimir Philippoff, Frederick H. Gaskins, and John G. Brodnyan—1118
Kinetics of spherulite growth in high polymers, Bruce B. Bennett and W. F. McDevit—1101
Lattice energy of crystalline polyethylene, Fred W. Billmeyer, Jr.—1114
Mechanical behavior of plastics, I. J. Gruntfest, E. M. Young, and Walter Kooch—1106
Nuclear magnetic resonance, radiation damage, and rigidity in branched polyethylene as a function of temperature, N. Fuschillo and J. A. Sauer—1073
Nuclear magnetic resonance studies of polyethylene, R. C. Rempel, H. E. Weaver, R. H. Sands, and R. L. Miller —1082
Photoelastic properties of polystyrene in the glassy state. I. Effect of molecular orientation, R. D. Andrews and J. F. Rudd—1091
Photoelastic properties of polystyrene in the glassy state. II. Effect of temperature, R. D. Andrews and E. F. Gurnee—1096
Tensile strength of plastics below the glass temperature, F. Bueche—784
Tridirectional x-ray patterns of oriented film at wide and small angles, W. O. Statton and Grace M. Godard—1111

Radiation Effects in Solids
Annealing of cold-worked copper by electron irradiation, C. J. Meechan—197
Application of luminescence changes in organic solids to dosimetry, J. H. Schulman, H. W. Etzel, and J. G. Allard—792
Damage to silicon produced by bombardment with helium ions, U. G. Gianola—868
Effect of irradiation on dynamic mechanical properties of 6-6 Nylon, C. W. Deeley, A. E. Woodward, and J. A. Sauer—1124
Effect of irradiation on the hole lifetime of *n*-type germanium, O. L. Curtis, J. W. Cleland, J. H. Crawford, and J. C. Pigg—1161
Etching behavior of pile-irradiated germanium and silicon single crystals, R. Chang—385
Expansions in reactor irradiated germanium and silicon, M. C. Wittels—921(L)
Fast neutron effects in tetragonal barium titanate, M. C. Wittels and F. A. Sherrill—606
Focusing in collision problems in solids, R. H. Silsbee —1246
Low-energy elastic scattering of electrons by oxygen and nitrogen, P. Hammerling, W. W. Shine, and B. Kivel —760
Low-temperature measurements of the Young's modulus and internal friction of copper during irradiation, D. O. Thompson, T. H. Blewitt, and D. K. Holmes—742

Radiation Effects in Solids (*continued*)
Low-temperature reactor irradiation effects in metals, T. H. Blewitt, R. R. Coltman, C. E. Klabunde, and T. S. Noggle—639
Nuclear magnetic resonance, radiation damage, and rigidity in branched polyethylene as a function of temperature, N. Fuschillo and J. A. Sauer—1073
Radiation effect of positive ion bombardment on glass, R. L. Hines—587
Resonant Cavities
Comments on frequency-pulling of maser oscillators, C. H. Townes—920(L)
Harmaodotron—a megavolt electronics millimeter wave generator, Murray D. Sirkis and Paul D. Coleman—944
Note on cavity perturbation theory, E. G. Spencer, R. C. LeCraw, and L. A. Ault—130
Reaction field and its use in some solid-state amplifiers, P. W. Anderson—1049
Retardation effects caused by ferrite sample size on the frequency shift of a resonant cavity, J. E. Tompkins and E. G. Spencer—969
Rheology
On creep and relaxation, I. L. Hopkins and R. W. Hamming—906
Studies in Newtonian flow. V. Further verification of the free-space viscosity equation, Arthur K. Doolittle and Dortha B. Doolittle—901
Theory of peeling through a Hookean solid, J. J. Bikerman—1484

Semiconductor Devices
Drift mobility measurements, Milton Green—1473
Effect of annealing in various gases on the bulk lifetime of germanium, K. Weiser—271
Effect of edge dislocations on the alloying of indium to germanium, Jacques I. Pankove—1054
Exact current-voltage relation for the metal-insulator junction with a simple model for trapping of charge carriers, G. H. Suits—454
Excess surface currents on germanium and silicon diodes, W. T. Eriksen, H. Statz, and G. A. deMars—133
Fabrication of multiple junctions in semiconductors by surface melt and diffusion in the solid state, K. Lehovic and A. Levitas—106
High speed microwave switching of semiconductors, R. V. Garver, E. G. Spencer, and R. C. LeCraw—1336
Influence of electric field in diffusion region upon breakdown in germanium *n-p* junctions, E. M. Pell—459
Low injection level behavior and base width measurement in junction transistors, Donald Long—1219(L)
Minority carrier lifetime in *p-n* junction devices, M. Byczkowski and J. R. Madigan—878
Ohmic and rectifying contacts to semiconducting CdS crystals, W. C. Walker and E. Y. Lambert—635
On the injection of carriers into a depletion layer, W. G. Matthei and F. A. Brand—513
Oxygen content of silicon single crystals, W. Kaiser and P. H. Keck—882
Preparation of large-area *p-n* junctions in silicon by surface melting, E. Billig and D. B. Gasson—1242
Rectification properties of metal-silicon contacts, E. C. Wurst and E. H. Borneman—235
Semiconductor properties of recrystalized silicon in aluminum alloy junction diodes, Richard Gudmundsen and J. Maserjain, Jr.—1308
Structure and characteristics of silicon carbide light-emitting junctions, L. Patrick—765
Temperature consideration in solar battery development, R. E. Halsted—1131

Semiconductors
Analysis of the dc and pulsed thermionic emission from BaO, George A. Haas—1486
Damage to silicon produced by bombardment with helium ions, U. G. Gianola—868
Detection of both vacancies and interstitials in deformed germanium, J. N. Hobstetter and P. Breidt, Jr.—1214(L)
Diffusion of oxygen in silicon, R. A. Logan and A. J. Peters—819(L)
Dislocation arrays in germanium, W. W. Tyler and W. C. Dash—1221
Donor diffusion in oxide cathodes, R. W. Peterson—1176
Effect of heat treatment upon the electrical properties of silicon crystals, C. S. Fuller and R. A. Logan—1427
Effect of irradiation on the hole lifetime of *n*-type germanium, O. L. Curtis, Jr., J. W. Cleland, J. H. Crawford, and J. C. Pigg—1161
Effect of oxygen on etch-pit formation in silicon, R. A. Logan and A. J. Peters—1419
Effect of structural defects in germanium on the diffusion and acceptor behavior of copper, C. S. Fuller and J. A. Ditzenberger—40
Etching behavior of pile-irradiated germanium and silicon single crystals, R. Chang—385
Etching of single-crystal germanium spheres, Ray C. Ellis, Jr.—1068(L)
Evaporation of impurities from semiconductors, K. Lehovec, K. Schoeni, and R. Zuleeg—420
Evaporation of impurities from semiconductors, Kurt Lehovec, Kurt Schoeni, and Rainer Zuleeg—1216(A)
Expansions in reactor irradiated germanium and silicon, M. C. Wittels—921(L)
Hillocks, pits and etch in germanium crystals, Boris W. Batterman—1236
Hydrothermal synthesis of photoconductive cadmium sulfide, A. Kremheller and A. K. Levine—746(L)
Lifetime in pulled silicon crystals, C. A. Bittmann and G. Bemski—1423
Measurement of minority carrier lifetimes with the surface photovoltage, E. O. Johnson—1349
Semiconductor properties of recrystalized silicon in aluminum alloy junction diodes, Richard Gudmundsen and J. Maserjain, Jr.—1308
Spiral etch pits in silicon, T. L. Johnston, C. H. Li, and C. I. Knudson—746(L)
Surface studies on single crystal germanium, S. G. Ellis—1262
Technique for connecting electrical leads to semiconductors, O. L. Anderson, H. Christensen, and P. Andreatch—923(L)
Thermionic and semiconducting properties of [Ag]-Cs_2O, Ag, Cs, John E. Davey—1031
Thermoelectric power and resistivity of solid and liquid germanium in the vicinity of its melting point, C. A. Domenicali—749
Triboluminescence in semiconductors, D. A. Jenny—1515(L)
Shock Waves
Acceleration of dust particles by shock waves, Stuart A. Hoenig—1218(L)
Dependence of the velocity of detonation of nitromethane on its initial temperature, M. P. Murgai—745(L)
Electrical conductivity of thermally ionized air produced in a shock tube, L. Lamb and S. Lin—754
Explosive induced shock waves. I. Plane shock waves, William E. Drummond—1437
Interaction of nonuniform shock waves, W. E. Drummond—76
Ionization by ultraspeed pellets, Charles D. Hendricks, Jr.—1339

Ionization in the trail of high-velocity pellets, W. S. Partridge and L. D. Harris—1269
Luminescent gas flow visualization for low density wind tunnels, W. B. Kunkel and F. C. Hurlbut—827
Multiple shock production, W. E. Drummond—998
New method of flow visualization for low-density wind tunnels, R. A. Evans—1005
Possible explanation of "after-jet" by the detonation of shaped charges, S. Singh—1365(L)
Shock Hugoniot of air, W. E. Deal—782
Shock sphere—an apparatus for generating spherical flows, I. I. Glass and J. G. Hall—424
Supersonic drag of spheres at low Reynolds numbers in free flight, Albert May—910
Time lag between high-speed pellets and ionization in their trails, R. A. Davidson and William S. Partridge —1304

Sound Waves

Absorption of Rayleigh waves in low loss media, Frank Press and Jack Healy—1323
Acoustic relaxations in ferrite single crystals, D. F. Gibbons—810
Air bubbles in water, L. Liebermann—205
Frequency dependence of ultrasonic attenuation and velocity on plastic deformation, A. Hikata and R. Truell—522
Reflection of plane waves of sound from a sinusoidal surface, H. S. Heaps—815
Reflection of sound from a surface of saw-tooth, Joseph Proud, Jr.—1298
Special theory of ultrasonic machining, G. E. Miller—149
Thermoelastic damping at the boundary between dissimilar solids, M. Lessen—364
Ultrasonic double refraction in single crystals, P. C. Waterman and L. J. Teutonico—266
Waves on the surface of a crystal, H. Deresiewicz and R. D. Mindlin—669

Space Charge

On the cause of the anomalous flicker effect, W. W. Lindemann and A. vander Ziel—448
Space charge effects in beam-type magnetrons, R. W. Gould—599

Spectra and Spectroscopy

Infrared emissivities and absorptivities of gases, S. S. Prenner and A. Thompson—614

Surface Properties

Backscattering a 5-20 kev electron from insulators and metals, J. E. Holliday and E. J. Sternglass—1189
Effect of illumination on the oxidation of copper single crystals in water, Jerome Kruger—1212(L)
Effects of electrode materials and surface preparation on CdS-metal contacts, R. A. Greiner, R. F. Miller, and R. C. Retherford—1358
Excess surface currents on germanium and silicon diodes, W. T. Eriksen, H. Statz, and G. A. deMars—133
Measurement of minority carrier lifetimes with the surface photovoltage, E. O. Johnson—1349
Photoelectric effect from borosilicate glass, Vijay Kumar Rohatgi—951
Radiation due to adhesive breaks between high polymers and glass, R. C. Williams—1043
Studies of molecular scattering at the solid surface, F. C. Hurlbut—844
Study of atomic structure of metal surface in the field ion microscope, E. W. Muller—1
Surface studies on single crystal germanium, S. G. Ellis —1262
Thermionic constants and sorption properties of hafnium, H. D. Hagstrum—323
Transmission of electrons through metal surfaces, R. H. Good, Jr.—1405
Trapping of helium ions and the re-emission of trapped atoms from molybdenum, L. J. Varnerin and J. H. Carmichael—913
U-effect-III; effect of liquid drop motion in mercury-electrolyte capillary tubes, B. Podolsky, G. Kushevics, and J. L. Rivers—357
Waves on the surface of a crystal, H. Deresiewicz and R. D. Mindlin—669
Work-function studies of germanium crystals cleaned by ion bombardment, J. A. Dillon, Jr., and H. E. Farnsworth—174

Thermal Conductivity and Thermal Conduction

Low temperature thermal conductivity of some commercial coppers, Robert L. Powell, H. Martin Roder, and William Rogers—1282
Rate of heat transfer in liquids with gas injection through the boundary layer, Earl E. Gose, Eugene E. Peterson, and Andreas Acrivos—1509(L)
Study of boiling in short narrow channels and its application to design of magnets cooled by liquid H_2 and N_2, G. G. Sydoriak and T. R. Roberts—143

Thermodynamic Properties

Air bubbles in water, L. Liebermann—205
Lattice energy of crystalline polyethylene, Fred W. Billmeyer, Jr.—1114
Temperature-dependent equations of state of solids, John J. Gilvarry—1253
Study of boiling in short narrow channels and its application to design magnets cooled by liquid H_2 and N_2, S. G. Sydoriak and T. R. Roberts—143

Thermoelectricity

Measurement of the thermoelectric power of a molten FeS-solid tungsten thermocouple, W. R. Bitler, L. Yang, and G. Derge—514
Performance of composite Peltier junctions of Bi_2Te_3, Theodore S. Shilliday—1035
Thermoelectric power and resistivity of solid and liquid germanium in the vicinity of its melting point, C. A. Domenicali—749

Thin Films

Dissipation of energy by 2.5-10 kev electrons in Al_2O_3, J. R. Young—524
Electrical properties of arc-evaporated carbon films, M. D. Blue and G. C. Danielson—583
Electrical resistances of thin metal films before and after artificial aging by heating, R. B. Belser—109
Equipment to measure the energy absorption of films at high strain rates, R. D. Spangler and E. B. Cooper—329
Ferromagnetic resonance absorption by thin conducting films in cavities, J. O. Altman—277(L)
Hall effect and ferromagnetism of very thin nickel films, R. Coren and H. J. Juretschke—806
Magnetic domain patterns on thin films, H. J. Williams and R. C. Sherwood—548
Magnetization reversal in thin films at low fields, R. L. Conger and F. C. Essig—855
Photoconductivity of thin films of arsenic trisulfide, H. Schlosser—512(L)
Preparation and photoconductive properties of cadmium telluride films, George G. Kretschmar and Lloyd E. Schilberg—865
Unusual ring structure of a vacuum-evaporated, thallium-doped selenium, H. C. Gorton—279

Transmission Lines and Wave Guides
Coaxial line nonreciprocal phase shifters, Max Sucher and Herbert Carlin—921(L)
Ferrite slabs in transverse electric mode wave guide, H. Seidel—218
Fields in gap-excited rectangular ducts, J. Van Bladel—1479
Junction of smooth flared wave guides, D. J. Leonard and J. L. Yen—1441
Theory of the microstrip, T. T. Wu—299

Turbulence
Applications of the electronic probe to the study of turbulent flames, D. W. Denniston, Jr., J. R. Oxendine, D. H. Knopschaefer, D. S. Burgess, and B. Karlovitz—70
Equipartition of energy and local isotropy in turbulent flows, Mihinder S. Uberoi—1165
Fading of radio waves scattered by dielectric turbulence, R. A. Silverman—506
Fading of radio waves scattered by dielectric turbulence, Richard A. Silverman—922(E)
On transition from laminar to turbulent flow, F. R. Hama, J. D. Long, and J. C. Hegarty—388
Rate of heat transfer in liquids with gas injection through the boundary layer, Earl E. Gose, Eugene E. Peterson, and Andreas Acrivos—1509(L)

Vacuum Technique
Analysis of gases at very low pressures by using the omegatron spectrometer, J. S. Wagener and P. T. Marth—1027
Characteristics of the Bayard-Alpert ionization gauge at pressures above 10^{-8} mm Hg, G. J. Schulz—1149

Vibrations
Fine structure of response curves of frequency entrained oscillations—1326
U-effect-III; effect of liquid drop motion in mercury-electrolyte capillary tubes, B. Podolsky, G. Kushevics, and J. L. Rivers—357

Viscosity and Viscoelasticity
Air bubbles in water, L. Liebermann—205
Dislocation damping at high temperatures, J. Weertman—193
Dynamic mechanical properties of polyhexene. I, S. F. Kurath, E. Passaglia, and R. Pariser—499
End corrections in the capillary flow of polyethylene, E. B. Bagley—624
Flow birefringence and stress. V. Correlation of recoverable shear strains with other rheological properties of polymer structures, W. Phillippoff, Frederick Gaskins, and John G. Brodnyan—1118
Flow in a viscous vortex, C. D. Pengelley—86
Hydrodynamic theory for the flow of a viscoelastic fluid, Y. Pao—591
Linear dissipation in solids, C. Lomnitz—201
On creep and relaxation, I. L. Hopkins and R. W. Hamming—906
Steady-state creep of crystals, J. Weertman—1185
Studies in Newtonian flow. V. Further verification of the free-space viscosity equation, Arthur K. Doolittle and Dortha B. Doolittle—901
Viscosity of suspensions of uniform spheres, J. Happel—1288

X-Rays and X-Ray Diffraction
A study of phase transitions in WO_3 with a high temperature x-ray diffractometer, J. A. Perri, E. Banks, and B. Post—1272
Comparison of wavelengths for x-ray diffraction, J. C. M. Brentano—822
Determination of the orientation of crystals in elongated particles, R. B. Campbell—381
Effects of layer faults in diamond structures on x-ray diffraction patterns, O. J. Guentert—1515(L)
Scattering by an inhomogeneous solid. II. The correlation function and its application, P. Debye, H. R. Anderson, Jr., and H. Brumberger—679
Semiempirical determination of mass absorption coefficients for the 5 to 50 Angstrom x-ray region, B. L. Henke, R. White, and B. Lundberg—98
Tridirectional x-ray patterns of oriented film at wide and small angles, W. O. Statton and Grace M. Godard—1111
X-ray determination of conjugate deformation twins in copper, F. A. Sherrill, M. C. Wittels, and T. H. Blewitt—526
X-ray properties of plastically deformed LiF, L. S. Birks and R. T. Seal—541
X-ray study of order in the alloy $CuAu_3$, B. W. Batterman—556
X-ray study of polygonization of copper single crystals, C. T. Wei, M. N. Parthasarathi, and P. A. Beck—874
